

OBSERVATIONS OF POSSIBLE MICROBIOTA IN COVID RNAm VACCINES Version I

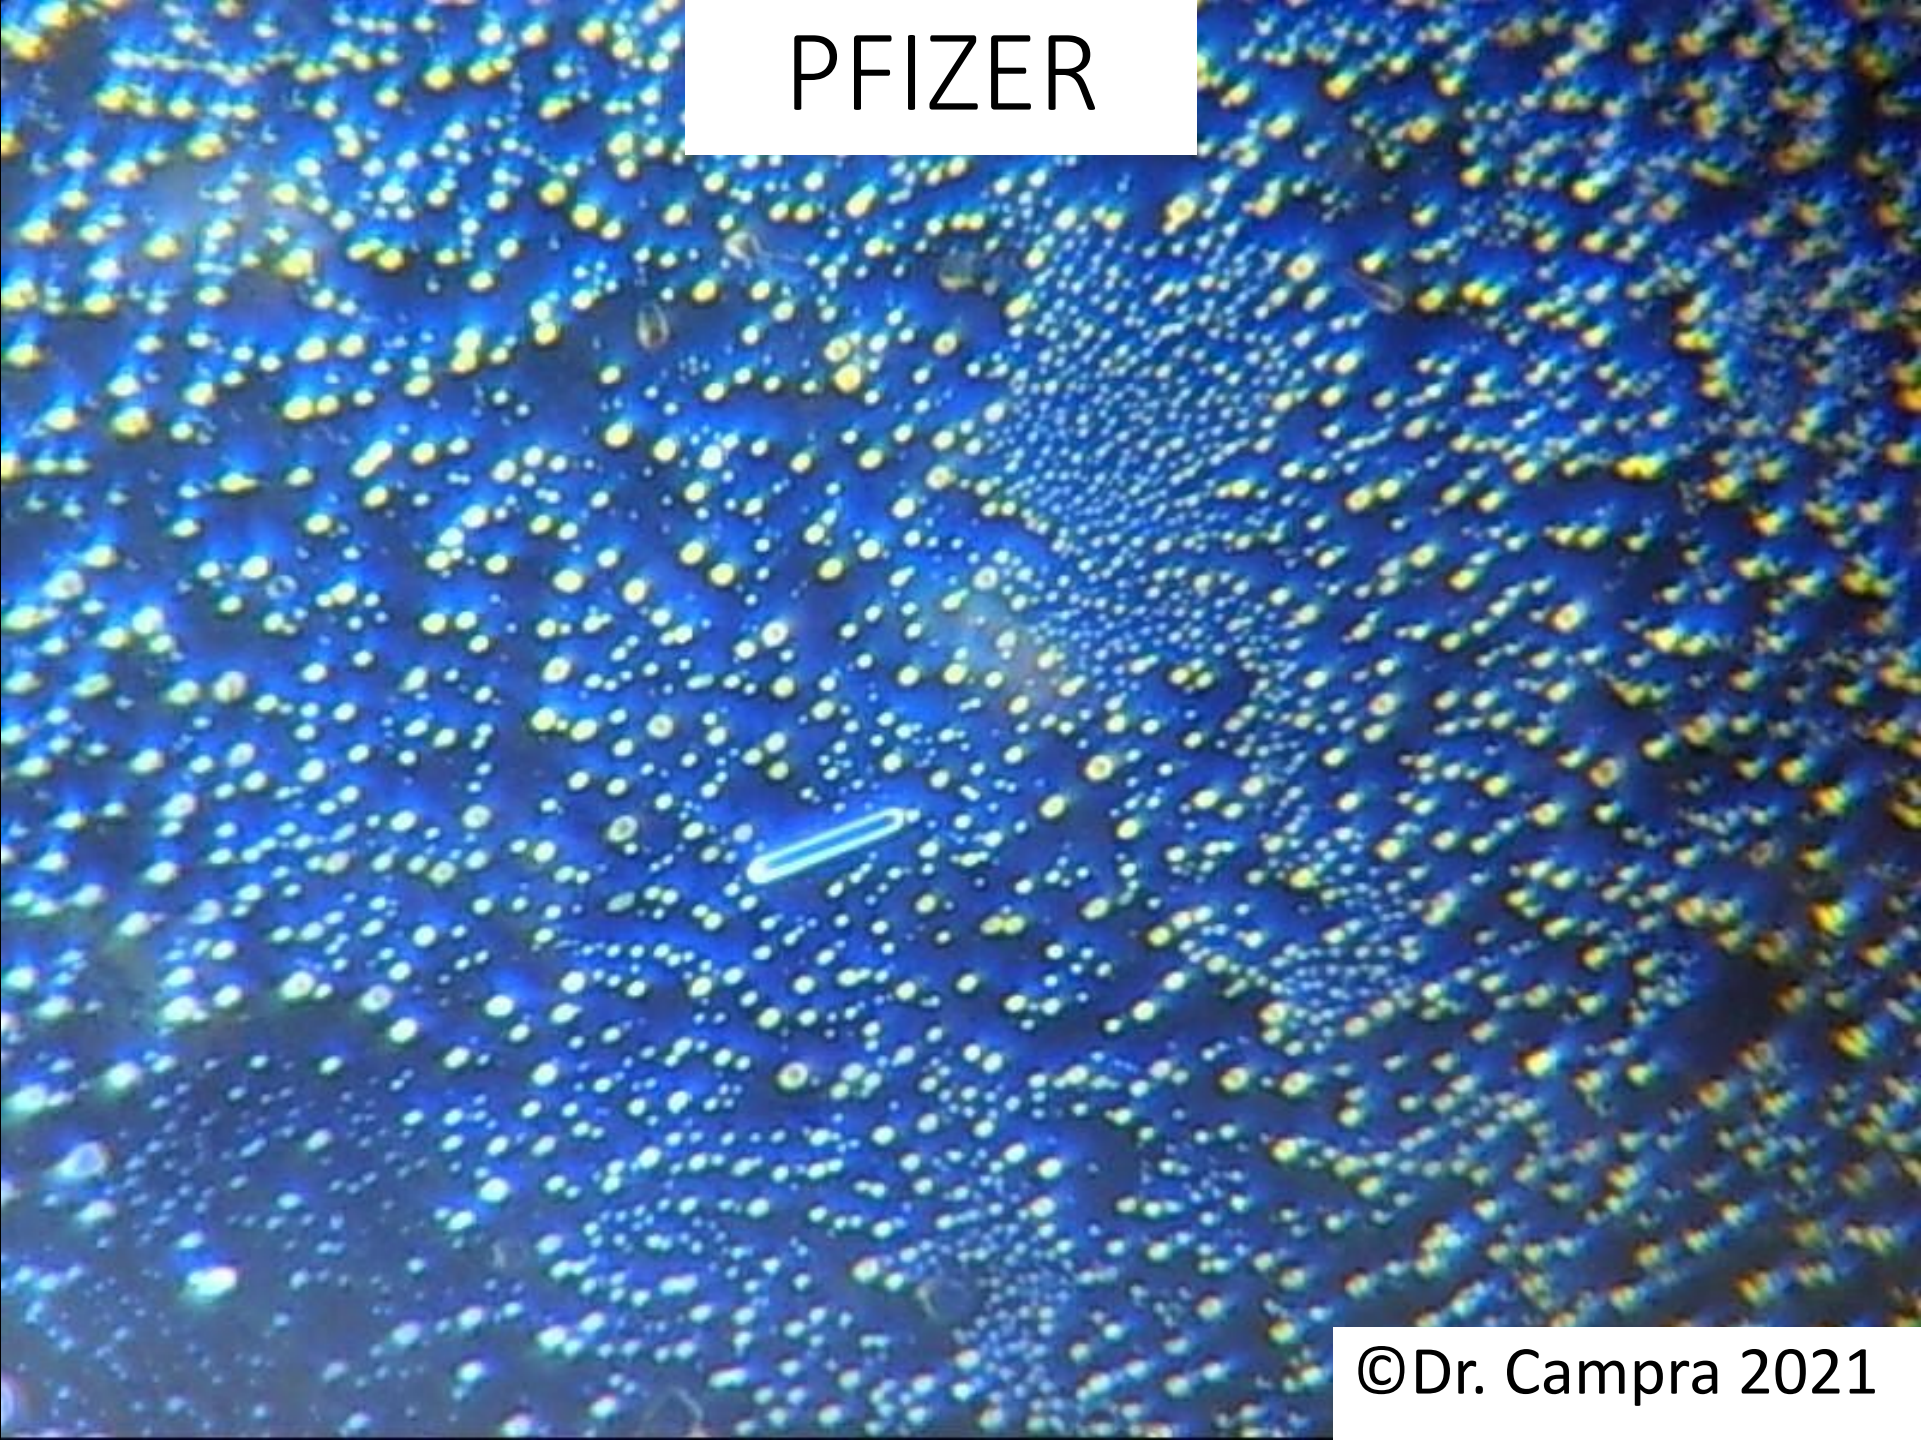

ARCHIVE by Dr. Pablo Campra

October 15th, 2021

NOTES

- Biological objects observed in SEALED vials by brightfield and darkfield microscopy at magnifications between 100x and 600X.
- The identity of these objects is currently unknown.
- The origin of these objects is also unknown, whether by inoculation, manufacture or subsequent manipulation.

A deep space photograph showing a dense field of stars against a dark blue background. In the center, there is a bright, glowing nebula with a greenish-yellow hue. The stars are of various colors, including white, yellow, and red. The overall image has a high-contrast, grainy texture typical of astronomical photography.

A microscopic image showing a network of plant tissue cells. The cell walls are highlighted with a bright blue fluorescence, while the internal cytoplasmic regions show a yellow-green fluorescence. The overall pattern is a complex, interconnected web of these fluorescent structures.
